Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1.-3. (Canceled).

4. (Currently Amended) A device for treatment of degenerative retinal disease, comprising: a moving member configured for chronic contact with at least a portion of an eye; and an actuator for activating the moving member to stimulate the eye to effectuate treatment of the degenerative retinal disease,

wherein the moving member comprises a magnet and the actuator comprises a magnetic field source.

- (Original) The device of claim 4, wherein the actuator is distally located relative to the moving member.
- (Original) The device of claim 4, wherein the moving member is configured for contact with a retina of the eye.
- (Original) The device of claim 6, wherein the moving member is configured for implantation in a subretinal space of the eye.
- (Original) The device of claim 4, wherein the actuator comprises a projecting arm coupled to the moving member.
- (Canceled).
- (Currently Amended) The device of claim [[9]]4, wherein the magnetic field source comprises an extraocular magnetic field source.

- (Currently Amended) The device of claim [[9]]4, wherein the magnetic field source comprises a time-varying magnetic field source.
- 12. (Currently Amended) The device of claim 4A device for treatment of degenerative retinal disease, comprising:

a moving member configured for chronic contact with at least a portion of an eye; and an actuator for activating the moving member to stimulate the eye to effectuate treatment of the degenerative retinal disease,

wherein the moving member comprises a body having a natural vibration frequency and the actuator comprises an oscillator operating substantially at the natural vibration frequency.

- (Original) The device of claim 12, wherein the oscillator comprises an extraocular oscillator.
- 14. (Currently Amended) The device of claim 4. A device for treatment of degenerative retinal disease, comprising:

a moving member configured for chronic contact with at least a portion of an eye; an actuator for activating the moving member to stimulate the eye to effectuate treatment of the degenerative retinal disease; and

further comprising: a body member supporting the moving member, wherein the body member supports the actuator, and wherein the actuator comprises an

electrical source.

15.-16. (Canceled).

- (Currently Amended) The device of claim [[16]]14, wherein the moving member comprises an electrostatically-activated member.
- (Currently Amended) The device of claim [[16]]14, wherein the moving member comprises a piezoelectric member.

- (Currently Amended) The device of claim [[16]]14, wherein the moving member comprises an electroactive polymer member.
- 20. (Currently Amended) The device of claim [[16]]14, wherein the actuator comprises a heating element coupled to the electrical source.
- 21. (Original) The device of claim 20, wherein the moving member comprises a deflectable membrane scaling a cavity formed in the body member, the cavity comprising a fluid, and wherein the heating element is positioned to heat the fluid thereby causing expansion of the membrane.
- 22. (Original) The device of claim 20, wherein the moving member comprises a shape memory alloy in thermal communication with the heating element.
- 23. (Currently Amended) The device of claim [[16]]14, wherein the electrical source comprises a photovoltaic element.
- 24.-26. (Canceled).
